Go-Global Installation instructions to TX and T2

Our checks were conducted on MS Windows 2000 and Win XP (sp1 and sp2) operating systems, with firewall security level of "Medium".

To install and use Go-Global, proceed as follows:

1. Go to:  http://www.technion.ac.il/GG
   - You may get the following Security Warning:
     "Do you want to install and run  http://www.technion.ac.il/GG/plugin.cab?"
   - Click the "Yes" button.

   The first time you do that, a dialog box will open. You will be asked:
   "Do you want to install this software?"
   - Click "Install".

   The "Connection" dialog box will open. 
   - Click "Cancel".

   **It is strongly recommended** - Work with SSL (Secure Socket Layer), a security protocol that provides communication privacy over the Internet. For that, you will have to change the default preferences as follows:

   i. In the "Go-Global UX window" click on Option -> Preferences 
   ii. In the "Transport:" drop-down list, choose "Secure Socket" -> Save

2. Please connect (again). In the connection dialog box type: techunix.technion.ac.il or techst02.technion.ac.il as the case may be.
   - (If you type only tx or t2 instead of the full name, a Security Alert will pop up. If that happens, click "Yes".)
3. An Authentication window will open. Provide your username and password.

4. The "GO-Global UX" desktop window will open.
   To launch an application, double click on the specific icon.
   If there is no ready-to-click icon, please double click either on the "Xterm" or on the "CDE" icon to open a session.

Tip: You can "drag" any application icon (say "Xterm" or "Pine") from the GO-Global panel to your Windows desktop and it will be kept there. Then on your next Windows session(s) you don't need to open the web browser and to go to the Go-Global site, you just click on your new GO-Global icon and ... Pine or Xterm to TX/T2 will appear on your Windows desktop.

Please check your quota before you start working; some of the system files which will be created may need more memory than is available to you.

For more information, see the HELP section of Go-Global.

(*) Note: Our current license of Go-Global 2 is limited to some 45 concurrent users. If you get a message that Go-Global is not available, wait few minutes and retry later. Depending on load, we might consider expanding the number of keys available at a later time.

For questions, support and feedback go to: http://helpdesk.technion.ac.il -> Software Support and open a problem ticket.
