Lightweight Cryptography is an emerging field of research trying to address low-end devices that need security such as RFID tags. The day is designated to be a meeting point between academia and industry, as this field is closely connected to both communities.

**Local organizer**: Orr Dunkelman

**Program chairs**: Nathan Keller & Itai Dinur

**Confirmed speakers include**:

- **Orhun Kara**, Tubitak, Turkey - The security of lightweight algorithms
- **Shay Gueron**, Haifa University, Israel - optimized hardware implementation of AES - from high performance to lightweight designs

Preliminary program and registration available here: [http://tce.technion.ac.il/events/lightweight-crypto-day-2016/](http://tce.technion.ac.il/events/lightweight-crypto-day-2016/)

**Monday, March 28th 2016**

Sponsored by:

**Technion Cyber Security Research Center**
